

**Software release 2.23**

Software release 2.23 is an enhancement of the AXIS 7000 Network Document Server and replaces the previous software. All previously delivered AXIS 7000 units can be upgraded with the new software, which is available free of charge on the Axis web site. All features of the previous software are retained.

The main highlights are:

***Support for additional scanning devices***

- Canon
  - DR-5020 (A3, Sheet feed b/w, grayscale and duplex)
  - DR-5080C (A3, Sheet feed, b/w, grayscale, color and duplex)
  - DR-4080U (A3, flatbed, b/w, grayscale, ADF and duplex)
  - FB1200S (A4, b/w, grayscale, color and optional ADF)
- Fujitsu
  - M4097D (A3, flatbed, b/w, ADF and duplex)
  - ScanPartner 620C (A4, b/w, grayscale, color and ADF)

***XML enhancements***

The XML based Index and Meta data functionality, available from release 2.20, is enhanced with the following new features:

- The Administrator can set a list of pre-defined values for the user to select from. This will make it easier for the user in applications where only pre-defined values are accepted such as 'Male/Female', 'Low/Medium/High', etc.
- Specify if the user will or not will be permitted to scan even if the XML DD (Document Description) cannot be loaded.
- Set the filename of the scanned image using of parts of the Index/Meta data entered by the user.

- The administrator will receive an e-mail when it not was possible to download the XML DD file. This functionality can be turned off.

### ***Other enhancements***

- Selectable SMTP mail server port for improved performance when using Send-to-E-mail.
- PDF rotation feature now selectable by paper size for digital copiers. This will make it possible to feed A4/Letter size with long-edge first and US Legal size with short-edge first and get both shown correctly on the screen.
- Support for Danish and Norwegian keyboards.
